

AR HARLEY & SONS LTD

TUV Certified American V Twin Motors and S & S Cycle

S & S Cycle supply EU/TÜV approved Evolution Style motors. They are certified to meet the current 2003/77/EC emission standards for exhaust, noise and electronic interference. In order to be compliant to EU/TÜV standards, these motors are furnished complete and assembled by S&S™ engine builders. In addition they MUST be used with specified gearing, stock H-D or aftermarket EU approved exhaust and S&S™ IST ignition systems. With the substitution of the special S&S™ camshaft, a special design carburettor, intake devices and the S&S™ IST ignition system these engines comply with all current EU/TÜV standards, making your next custom motorcycle more easily registered or as a replacement for an existing HD motor. In some parts of the EC TUV compliance is a requirement before legal registration. In other countries emission and noise regulations will demand standards similar to TUV requirements. TUV certified motors must be a serious consideration for any potential purchaser of an American V Twin motor in any European country! Building a successful custom motorcycle is an expensive and complex process and making the choice to use a motor with a TUV certificate removes one problem for the builder. It also provides a useful selling point if you decide to later sell your bike on!
